## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, all references to planetary gearing (e.g. claims 18 and 30) must be shown or the feature(s) canceled from the claim(s) (for example, sun gear, planet gear, etc.). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Specification***

2. The disclosure is objected to because of the following informalities: The specification includes terminology which is different from that which is generally accepted in the art to which this invention pertains. For example: the reference to planetary gearing (sun, planet, etc.) is terminology inconsistent with industry accepted terms. The gearing of the present application would be more accurately defined as a pinion and mutilated gear; or perhaps a rack with a curvilinear rack. Note the reference supplied which shows true planetary gearing in a window operator (5,493,813). It is clear from this reference that the instant application does not use planetary gearing. Applicant is cautioned on the introduction of new matter into the application.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 18, 20-23 and 30-35 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In claim 18, the use of planetary gearing terminology "(e.g. "planet gear

Art Unit: 3682

portion", "sun gear") is not understood because there is no planetary gearing shown in the drawings and one of ordinary skill would not know how to make or use the invention.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-6, 8-13, 15-18, 20-24 and 26-39 are rejected under 35 U.S.C. 102(b) as being anticipated by Winner (5,802,913).

Winner shows the claimed invention where a casement window operator (10) has an input worm (14) which engages a gear 34) which drives an arm (32) to open and close a casement window; the mutilated gear (34) is mounted on a bushing (22) which has a diameter at the base and a smaller diameter above the base; the entire window operator being enclosed in a case (11, 18); the base providing for support of the worm and mutilated gear so that relative movement between the worm and the mutilated gear is minimized. Note the limitations regarding swaging; the use of this type of securing means does not materially change the device. The method claims being met since the device is assembled and all of the claimed components are present in Winner.
